### SKILLS

HTML, CSS, Bootstrap, JavaScript, TypeScript, ReactJS, Redux, Firebase, Docker, RESTful API, Git/GitHub, CI/CD

### PROJECTS

#### [Cryptocere](#)

- Developed an app for fundamental analysis of the digital currency market, including tracking price, volume, and market capitalization.
- Created a user-friendly website that utilizes the CoinGecko API to retrieve and display a list of coins that users can favorite.
- Implemented a secure authentication flow using Firebase for seamless login and sign-up processes.
- Efficiently managed state using the Context API, optimizing performance and enhancing the overall user experience.

#### [Fabucart](#)

- Developed an online store with a user-friendly interface that allows users to browse and manage a list of items, with the ability to add and remove items from the cart.
- Implemented a highly responsive design, ensuring optimal viewing and usability across different devices.
- Utilized ReactJS and Redux to build the application, providing a robust and efficient framework for state management and user interactions.

#### [TechTime](#)

- Developed a highly responsive and visually engaging single-page website utilizing ReactJS library, delivering seamless user experience through its integrated UI.
- Streamlined the development, deployment, and maintenance of the project through comprehensive documentation and efficient dockerization, ensuring consistency and compatibility across multiple environments.
- Technologies: HTML, CSS, ReactJS, Docker, Git/GitHub, SwipeJS, CI/CD with Netlify
- [Code on GitHub](#)

#### [Cinema Plus](#)

Cinema Plus is a web application that utilizes the MovieDB API to retrieve and showcase movie information through an attractive user interface.

- Developed a secure authentication flow integrated with Firebase for seamless sign-up, log-in, and password recovery.

- Implemented efficient state management using the context API, improving app performance and optimizing data management.
- Expertly handled form validations and data using Formik and Yup, ensuring accurate and secure input.
- Utilized the Axios package to manage network requests and integrate with the MovieDB API, enhancing data transfer and performance.
- Implemented a feature to save and delete bookmarked movies in Firebase Cloud Storage, improving functionality and user experience.
- Technologies: HTML, CSS, ReactJS, Firebase
- [Code on GitHub](#)

### **Portfolio**

- A showcase of client projects, including contact information, a personal blog, and a portfolio of completed work, all delivered through the use of Netlify for seamless deployment and achieving outstanding outcomes.
- HTML, CSS, JavaScript, React, Netlify, Git/GitHub.
- [Code on GitHub](#)

### **Couch Surfing**

A simple\_web app showcasing houses sourced from the internet. Built with HTML, CSS, TypeScript.
